

Always-on, fast, reliable Internet connections for your E-commerce sites, multiple band-width intensive applications, and remote access to business data

High-Performance, Fully Redundant

CBTS Dedicated Internet Access (DIA) products provide always-on, fast and reliable connections over an optical-enabled IP backbone. The service is available with bandwidth up to 10 Gbps locally, regionally and nationally. Our DIA product has the network reliability and performance to support your bandwidth-intensive application needs, including:

- Multiple, simultaneous users of Internet applications
- High-performance routing of File Transfer Protocol (FTP)
- Ability to transmit video and image files
- Real-time video conferencing and VoIP
- Hosting and content delivery
- E-commerce capabilities that enable you to bring your business closer to your customers, suppliers and employees

Customer Benefits

DIA gives customers a constant, reliable connection to the Internet. Setting a new standard for network capabilities, our architecture has the capacity to enable bandwidth-intensive applications at virtually the speed of light.

Additional benefits include:

- Fast and reliable Internet connectivity and communication
- Improved operational and employee efficiency
- Real-time product and service updates
- Global reach and availability
- Bandwidth options from 1.5 Mbps to 10 Gbps meeting current network needs while providing future growth potential

Why CBTS?

- **Exceptional Performance** - Our hierarchical network design minimizes network hop-counts and produces a network that is very easy to maintain.
- **Exceptional Peering** - We provide a unique blend of backbone peering and direct access to over 25 web content providers to maximize network efficiency and greatly reduce hop-counts and service latency.
- **Exceptional Service** - Our proactive circuit management and industry leading Managed Network Services provide customers with real-time monitoring and service management.
