

Eliminate the complexities of your security appliance, while improving your control over security policies

Fully Hosted and Supported

CBTS Hosted Internet Security Solution delivers a suite of firewall security services in the CBTS cloud, eliminating the need to purchase and manage a traditional firewall appliance on your business premises. It is the first line of perimeter defense to protect your enterprise from security attacks.

This solution is hosted by CBTS and allows our security experts to configure, monitor and support each customer by applying each customer's unique set of policies, or allow the customer access to a self administration portal. The virtualized firewall security environment enables you to reduce overall network costs and allows your staff to focus on mission-critical activities.

The security services offered by this solution include:

- Firewall filtering and protection
- Secure socket layer (SSL) VPNs
- Base web filtering
- Application control
- Intrusion Prevention System (IPS) based on signature thresholds

Customer Benefits

Increase security

- A hosted security solution that easily integrates with your CBTS voice, data and network services
- SLA-based services supported by CBTS security experts 24x7 from our Network Operations Center (NOC)

Lower capital and operational costs

- No upfront cost for equipment
- No per-user licensing over network use
- Hardware, software and expert support all included in an affordable monthly bill

Eliminate annual maintenance renewals and end-of-life hardware

- With no hardware purchase, it's the end of obsolescence
- Eliminates upgrades and maintenance licensing fees
